To select the proper size mask for your telescope, measure the outer diameter of your scope and select the next largest mask size. The nylon thumbscrews will allow the mask to be fitted properly to your scope.

MASK SIZES

QTY	DESCRIPTION	PRICE
	16 Inch mask	\$89.95
	15 Inch mask	\$89.95
	14 Inch mask	\$89.95
	13 Inch mask	\$89.95
	12 Inch mask	\$89.95
	11 Inch mask	\$89.95
	10 Inch mask	\$79.95

QTY	DESCRIPTION	PRICE
	9 Inch mask	\$79.95
	8 Inch mask	\$69.95
	7 Inch mask	\$69.95
	6 Inch mask	\$69.95
	5 Inch mask	\$59.95
	4 Inch mask	\$59.95
	Custom mask

Spike-a Instructions

Your Spike-a focusing mask package includes three nylon thumbscrews and three Rubatex foam pads.

Insert the nylon thumbscrews into the threaded holes in the three tabs on the mask. Make sure the screws are inserted far enough so each screw extends beyond the metal threaded insert.

Next, hold the mask up to your scope carefully and note where the mask will make contact with the front of your telescope. Cut the 3 foam pads if necessary and attach to the inside of the mask to prevent the mask from scratching the front of your telescope.

Finally, place the mask on the front of your scope and adjust the thumbscrews until they nearly touch the outside of your telescope. If you will be slewing the scope with the mask attached, tighten the thumbscrews enough to prevent the mask from falling off during slewing.

The Spike-a mask's thumbscrews provide enough travel to accommodate scopes up to two inches smaller in diameter, so you may be able to use one mask with more than one scope.

Set up your imaging equipment as normal, slew to a relatively bright star and attach the Spike-a mask. Adjust the focus until the center diffraction spike is exactly centered inside the outer 2 spikes. If the diffraction spikes are too small or not bright enough, try increasing the length of your exposure. Once you have the spike pattern centered, lock your focusing lock knob and remove the mask. You're now ready to image!
